

## **Boilerplate Descriptions**

### **About Aquana**

Aquana's premier Internet of Things (IoT) platform offers multifunctional, modular, and enterprise ready solutions serving the rapidly growing water utility and property management markets. The Company's water management solutions deliver remote shutoff valve control, remote AMI meter reading, as well as leak and burst protection for multi-family properties, commercial buildings, and utilities. Aquana combines connected smart valve hardware with cloud-based software in a Software as a Service (SaaS) recurring revenue model. Learn more at [www.Aquana.com](http://www.Aquana.com).

### **About Geospace Technologies**

Geospace Technologies is a global technology and instrumentation manufacturer specializing in vibration sensing and highly ruggedized products which serve energy, industrial, government and commercial customers worldwide. The Company's products blend engineering expertise with advanced analytic software to optimize energy exploration, enhance national and homeland security, empower water utility and property managers, and streamline electronic printing solutions. With more than four decades of excellence, the Company's more than 600 employees across the world are dedicated to engineering and technical quality. Geospace is traded on the U.S. NASDAQ stock exchange as GEOS. For more information, visit [www.geospace.com](http://www.geospace.com).
